

Sales and Service

Inclusion of Identification Labels for MR-J4W Series

Thank you for your continued patronage of the Mitsubishi general-purpose AC servo and FA products. The following models will include identification labels to be attached to the power cable connector, encoder cable connector, and servo amplifier itself for easier visual identification by different colors among the A, B, and C axes during and after wiring operation.

Please check the following contents, and we ask for understanding in this matter.

1. Target Models

MR-J4W2-□□B, 200W to 1kW

MR-J4W3-□□□B, 200W to 400W

Note. Servo motor power cables and encoder cables will not include the labels in their package.

2. Schedule

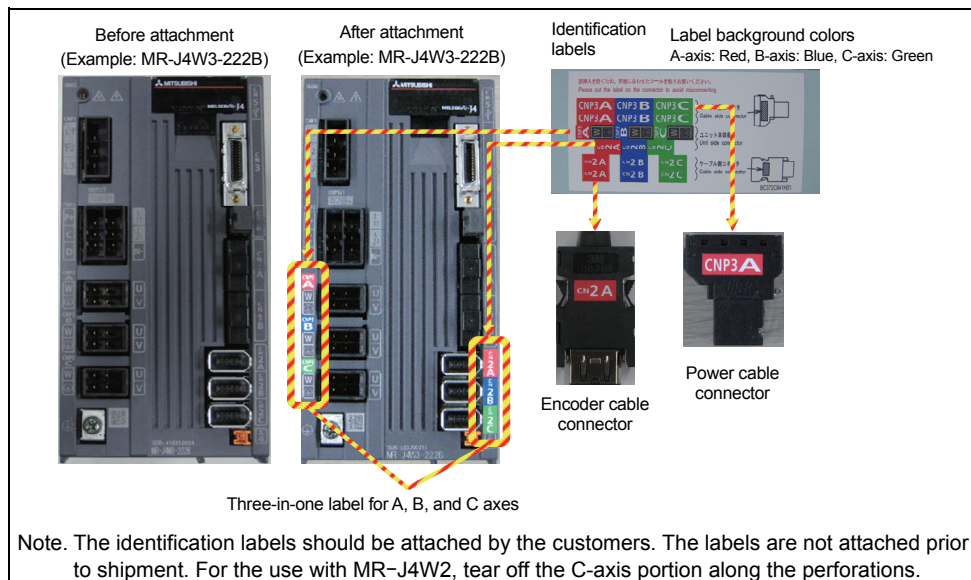

This change will be applied to the products, which will be manufactured and shipped in April 2013 or later.

Because of inventories, old and new products may exist in the distribution stage. We ask for your understanding in this matter.

3. Purpose

To support customers with proper wiring and easy identification of each axis after wiring

4. Example of the Labels and How to Attach Them

5. Supplement

The labels are a measure to prevent improper wiring of connectors. The current printing required for wiring will remain on the servo amplifiers as shown in the above photo. Functions and performance of the servo amplifiers will not be affected by not attaching of the labels. The labels should be attached by the customer as required.
