Change in the Appearance of the Mounting Hole Portion for General-Purpose AC Servo Amplifiers

Thank you for your continued patronage of the Mitsubishi general-purpose AC servo and Mitsubishi Electric FA products.

To improve the obtainability of the structural part for AC servo amplifiers, the part with mounting holes will be changed. The appearance of the mounting hole portion will be changed accordingly. We ask for your understanding in this matter. This change does not affect the mountability of the servo amplifiers.

1. Target Models

MR-J4-500_, MR-J4-350_4 (A symbol "_" indicates A, B, or GF.)

2. Reason for Change

To improve the obtainability of the structural part.

3. Details of the Change

The part with mounting holes is changed. The surface of the new part is molded instead of being machined, and thus the appearance of the mounting hole portion is changed as follows.

The dimensions of the servo amplifier including the mounting holes remain the same.

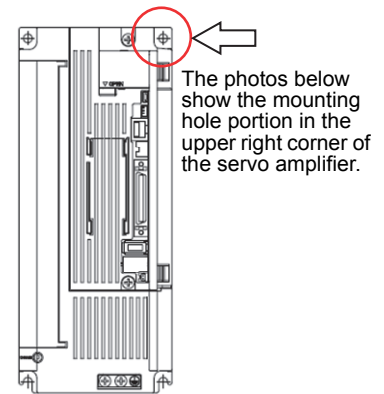

Table 1. Appearance of the mounting hole portion

	Before change	After change
View seen from the front of the unit		

4. Schedule

This change will be made sequentially from the September 2016 production.

There may be cases where both the former and new products exist in the distribution stage.
