

## **Information for Replacement of FR-A700-A1 Inverters**

Replacement model

FR-A800-R2R inverters

Size, connection, parameters, options concerning replacement are stated on the following pages.

## 1. NEW INVERTER

The FR-A800-R2R inverters have two types of specifications FM type and CA type.  
When replacing the Japanese model FR-A700-A1 inverters, select the FM type inverters (FR-A8[ ]0-[ ]K-1-R2R).

## 2. SIZE

When the FR-A700-A1 inverters is replaced with the FR-A800-R2R inverters, the required installation space of the 280K FR-A800-R2R inverters or lower is the same as that of the corresponding FR-A700-A1 inverters.

For more information about the product size, refer to the outline dimension drawings on the following pages.

[Inverter alone]

Existing inverter	New inverter	Installation space comparison
FR-A720-0.4K	FR-A820-0.4K-R2R	Same
FR-A720-0.75K	FR-A820-0.75K-R2R	Same

FR-A740-280K	FR-A840-280K-R2R	Same

For the installation, prepare screws of the appropriate length as necessary.

When the inverter is installed with its heat sink protruding through a panel, the replacement is possible using the same enclosure with the panel cutout for the FR-A700-A1 inverter.

[When protruding the heat sink through a panel]

### 3. WIRING

The wiring of the new inverters can follow the one of the existing inverters as the terminal names between them are almost the same.

Type		FR-A700-A1 terminal name	FR-A800-R2R compatible terminal name

\*1) For the FR-A820-15K to 22K-R2R and the FR-A840-18.5K to 55K-R2R, connect the brake resistor to terminals P3 and PR.

\*2) For the FR-A820-15K to 22K-R2R and the FR-A840-18.5K to 55K-R2R, connect the brake unit to terminals P3 and N/-.

## Main circuit terminal layout

The following shows the main circuit terminal layouts of the FR-A700-A1 inverters and FR-A800-R2R inverters.

The main circuit terminal layout and the position of the earth (ground) terminal may differ depending on the capacity. Check the terminal names and positions before performing wiring.

If cables used for the FR-A700-A1 inverters are not long enough for the FR-A800-R2R inverters, replace them with the longer one.

## Control circuit terminal layout

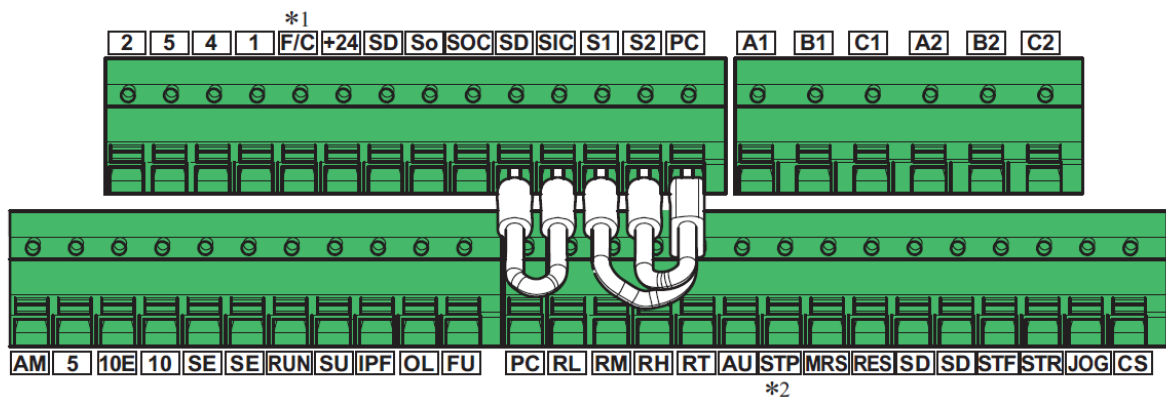

The following shows the control circuit terminal layouts of the FR-A700-A1 inverters and the FR-A800-R2R inverters.

The control circuit terminal layout of the FR-A700-A1 inverters differs from that of the FR-A800-R2R inverters. Check the terminal names and positions before performing wiring.

### ■ FR-A700-A1 inverters

### ■ FR-A800-R2R inverters

\*1 Terminal FM for the FM type inverters, or terminal CA for the CA type inverters.

\*2 Terminal STOP.

The control circuit terminal block intercompatibility attachment FR-A8TAT allows the control circuit terminal block of the FR-A700-A1 inverters to be installed on the FR-A800-R2R inverters, but restrictions are applied. Refer to the Instruction Manual of the FR-A8TAT for details.

## ◆ Wiring method

### • Power supply connection

For the control circuit wiring, strip off the sheath of a cable, and use it with a blade terminal. For a single wire, strip off the sheath of the wire and apply directly. Insert the blade terminal or the single wire into a socket of the terminal.

- (1) Strip off the sheath for the below length. If the length of the sheath peeled is too long, a short circuit may occur with neighboring wires. If the length is too short, wires might come off. Wire the stripped cable after twisting it to prevent it from becoming loose. In addition, do not solder it.

Cable sheath stripping length

- (2) Crimp the terminals by inserting the wires into a blade terminal. Insert wires to a blade terminal, and check that the wires come out for about 0 to 0.5 mm from a sleeve. Check the condition of the blade terminal after crimping. Do not use a blade terminal of which the crimping is inappropriate, or the face is damaged.

- Blade terminals commercially available (as of Jan. 2017)

Cable gauge (mm <sup>2</sup> )	Ferrule terminal model			Manufacturer	Crimping tool name
	With insulation sleeve	Without insulation sleeve	For UL wire <sup>*1</sup>		
0.3	AI 0.34-10TQ	—	—	Phoenix Contact Co., Ltd.	CRIMPFOX 6
0.5	AI 0.5-10WH	—	AI 0.5-10WH-GB		
0.75	AI 0.75-10GY	A 0.75-10	AI 0.75-10GY-GB		
1	AI 1-10RD	A 1-10	AI 1-10RD/1000GB		
1.25, 1.5	AI 1.5-10BK	A 1.5-10	AI 1.5-10BK/1000GB <sup>*2</sup>		
0.75 (for two wires)	AI-TWIN 2×0.75-10GY	—	—		

- \*1 A ferrule terminal with an insulation sleeve compatible with the MTW wire which has a thick wire insulation.  
\*2 Applicable for terminal A1, B1, C1, A2, B2 and C2 only.

Cable gauge (mm <sup>2</sup> )	Blade terminal product number	Insulation cap product number	Manufacturer	Crimping tool product number
0.3 to 0.75	BT 0.75-11	VC 0.75	NICHIFU Co., Ltd.	NH 69

- (3) Insert the wires into a socket.

When using a single wire or stranded wires without a blade terminal, push the open/close button all the way down with a flathead screwdriver, and insert the wire.

### • Wire removal

Pull the wire while pushing the open/close button all the way down firmly with a flathead screwdriver.

## NOTE

- When using stranded wires without a blade terminal, twist enough to avoid short circuit with a nearby terminals or wires.
- During wiring, pulling out the wire forcefully without pushing the open/close button all the way down may damage the terminal block.
- Use a small flathead screwdriver (tip thickness: 0.4 mm, tip width: 2.5 mm).
- If a flathead screwdriver with a narrow tip is used, terminal block may be damaged.

Commercially available products (as of February 2016).

Name	Model	Manufacturer
Driver	SZF 0-0.4 x 2.5	Phoenix Contact Co., Ltd.

- Place the flathead screwdriver vertical to the open/close button. In case the blade tip slips, it may cause an inverter damage or injury.

## 4. PARAMETER

### 4. 1. Parameter List

Note that most parameter numbers of the two inverters are the same but some setting values differ. Refer to the following table to set the parameters.

The FR-A800-1-R2R inverters have advanced Roll to Roll functions compared to the FR-A700-A1 inverters. Read the Instruction Manual of inverters carefully and configure the setting properly.

#### List of FR-A800-R2R inverter parameters compatible with the FR-A700-A1 inverter parameters

The following table shows the parameter settings required when replacing FR-A700-A1 inverters with FR-A800-1-R2R inverters (ND rating).

To use the FR-A800-R2R in the ND rating, set Pr.570 to "2 (initial value)".

For parameters of the FR-A700-A1 inverters whose setting has been changed from the initial value, set the corresponding FR-A800-1-R2R inverters (ND rating) according to the following table.

For parameters of the FR-A700-A1 inverters whose setting has not been changed from the initial value, it is basically not necessary to change the setting of the corresponding parameters of the FR-A800-1-R2R inverters (ND rating).

The parameters marked with Δ in the "Setting" area are used for adjustment. Set them as necessary.

The parameter settings of the FR-A800-R2R inverters as shown in the table below does not guarantee the inverter characteristics or performance.

As differences between the FR-A700-A1 inverters and the FR-A800-R2R inverters, the command methods for the dancer control and torque control are changed (improved) as follows.

	FR-A700-A1	→	FR-A800-R2R
Dancer control	Motor speed (Hz, r/min)	→	Line speed (m/min); The increment is determined by Pr.358.
Torque control	Motor torque command (%)	→	Tension command (N); The increment is determined by Pr.1401.

Setting ◎: Use the same setting of the FR-A700-A1 inverter.

△: Change the setting of the FR-A700-A1 inverter as needed.

×: Adjust and set the FR-A800-R2R parameter independently.

-: Setting is not required in the FR-A800-1-R2R.

The number of the parameter in    is different from the FR-A700-A1 inverters.

Use the parameter in    instead of the parameter in the row above when the X114 signal is ON.

FR-A700-A1 parameter				FR-A800-1-R2R (ND rating) compatible parameter				Description about parameter setting	
Number	Name	Setting range	Initial value	Number	Name	Setting range	Initial value	Setting	Remarks
0	Torque boost	0 to 30%	0.4 to 0.75K: 6% 1.5K to 3.7K: 4% 5.5K, 7.5K: 3% 11K to 55K: 2% 75K or higher: 1%	0	Torque boost	0 to 30%	0.4 to 0.75K: 6% 1.5K to 3.7K: 4% 5.5K, 7.5K: 3% 11K to 55K: 2% 75K or higher: 1%	△	Basically use the same setting of the FR-A700-A1 inverter. #### 4.3. Compatibility of the Terminal Response Speed

The response of the input/output terminals of the FR-A800-R2R inverters is improved compared to the FR-A700-A1 inverters. Operation timing of the device may differ depending on the usage.

In such cases, use Pr.289 (Inverter output terminal filter) and Pr.699 (Input terminal filter) to adjust the terminal response time.

Set about 5 to 8 ms in Pr.289 and Pr.699 and adjust according to the system.

#### 4.4. Input Signals not Inherited from FR-A700-A1 Inverters

Some I/O signals are added or deleted for the FR-A800-R2R inverters compared to the FR-A700-A1 inverters.

The following shows the replacement setting method for the input signals not inherited to the FR-A800-R2R inverters from the FR-A700-A1 inverters.

Input signal used in the FR-A700-A1	Replacement input signal used in the FR-A800-R2R	Remarks
X35 (Speed compensation gain selection)	No signal	Setting is not required because the speed compensation gain is initially enabled in the FR-A800-R2R inverters.
X56 (Winding/unwinding selection)	X126 (Two-way operation)	During tension feedback speed control or tension sensor feedback control → In addition to the winding/unwinding selection, PID action (forward/reverse), and start command (STF/STR) are changed at once, which allows easy switching between two directions.
		During tension sensorless torque control →The signal has the same function of the Winding/unwinding selection (X56) signal in the FR-A700-A1 inverters.

#### 4.5. Dedicated Monitor Items

Some dedicated monitor items are added or deleted for the FR-A800-R2R inverters compared to the FR-A700-A1 inverters.

Accordingly, the setting value used in Pr.52 (Operation panel main monitor selection) is changed. The following table shows the correlation in setting values and monitor item name between two inverters.

Monitor item in the FR-A700-A1		Monitor item in the FR-A800-R2R		Remarks
Pr.52 setting	Monitor item name	Pr.52 setting	Monitor item name	
26	Terminal 1 input voltage	85	Terminal 1 input voltage	
27		86	Terminal 1 input after calibration (%)	Name changed.
39	Dancer tension command	19	Analog output signal for dancer tension control	Name changed.
40	Winding diameter	22	Winding diameter	
41	Main speed	26	Line speed command	Monitor item changed due to the changed command input method.
42	Line speed	27	Actual line speed	Name changed.
43	Dancer compensation speed	28	Dancer compensation speed	
44	Winding diameter compensation speed	97	Winding diameter compensation speed	
45	Winding/unwinding length	29	Winding length (lower 4 digits)	Name changed.
46	Dancer tension command 2	30	Analog output signal 2 for dancer tension control	Name changed.
52	Dancer roll set point	52	PID set point	Name changed.
53	Measured dancer roll value	53	PID measured value	Name changed.
54	Dancer roll position deviation	54	PID deviation	Name changed.
62	Line speed pulse monitor	31	Line speed pulse monitor	
63	Tension command	82	Winding diameter compensation torque command	Name changed.
64	Mechanical loss compensation	84	Mechanical loss compensation	
65	Inertia compensation	83	Inertia compensation	

## 5. OPTION

### 5.1. Option List

The following table shows the comparison of options between the FR-A700-A1 inverters and the FR-A800-R2R inverters.

Name		Option model	
		FR-A700-A1	FR-A800-R2R
Plug-in type	12-bit digital input	FR-A7AX	FR-A8AX
	Digital output, additional analog output	FR-A7AY	FR-A8AY
	Relay output	FR-A7AR	FR-A8AR
	Bipolar analog output	FR-A7AZ	FR-A8AZ
	High resolution analog input		
	Motor thermistor interface		
	Orientation/encoder/pulse train input	FR-A7AP	FR-A8AP
	Orientation/encoder/vector position	FR-A7AL	FR-A8AL
	Pulse division		
	PROFIBUS-DP	FR-A7NP	FR-A8NP
	DeviceNet	FR-A7ND	FR-A8ND
CC-Link	FR-A7NC	FR-A8NC	
FL remote communication	FR-A7NF	N/A	
Stand-alone type	Parameter unit	FR-PU07	Compatible Parameter copy can be performed for only one unit. Some parameter names are different. The parameter unit cannot be directly installed on the inverter.
	Parameter unit connection cable	FR-CB201, 203, 205	Compatible
	Inter-compatibility attachment	FR-AAT, FR-A5AT	Compatible
	Panel through attachment	FR-A7CN	FR-A8CN Panel cutout is compatible except for some capacities. The depth of the inverter within/without the enclosure differs. For the details, refer to the Instruction Manual of FR-A8CN (1).
	Surge voltage suppression filter	FR-ASF-H	Compatible
	Power factor improving DC reactor	FR-BEL(-H)	FR-HEL(-H)
	Power factor improving AC reactor	FR-BAL(-H), MT-BAL(-H)	FR-HAL(-H)*
	Radio noise filter	FR-BIF(-H)	Compatible
	Line noise filter	FR-BSF01, FR-BLF	Compatible
	BU type brake unit	BU1500 to 15K, H7.5K to 30K	Compatible
	Brake unit	FR-BU(-H), FR-BU2	Compatible The MT-BU5 is not compatible.
	Resistor unit	FR-BR(-H), MT-BR5(-H)	Compatible
	FR-RC type power regeneration converter	FR-RC(-H), MT-RC(-H)	Compatible
	FR-CV type power regeneration common converter	FR-CV(-H)7.5K(-AT) to 55K	Compatible
	Stand-alone reactor dedicated for the FR-CV	FR-CVL(-H)7.5K to 55K	Compatible
	FR-HC type high power factor converter	FR-HC(-H), MT-HC(-H), FR-HC2(-H)	Compatible
Sine wave filter	Reactor	MT-BSL(-H)	Compatible
	Capacitor	MT-BSC(-H)	Compatible
Manual Controller/Speed controller	Manual controller	FR-AX	Compatible
	DC tach. follower	FR-AL	Compatible
	Three speed selector	FR-AT	Compatible
	Motorized speed setter	FR-FK	Compatible
	Ratio setter	FR-FH	Compatible
	Speed detector	FR-FP	Compatible
	Master controller	FR-FG	Compatible
	Soft starter	FR-FC	Compatible
	Deviation detector	FR-FD	Compatible
	Preamplifier	FR-FA	Compatible
Others	Pilot generator	QVAH-10	Compatible
	Deviation sensor	YVGC-500W-NS	Compatible
	Frequency setting potentiometer	WA2W 1kΩ	Compatible
	Frequency meter	YM206NRI 1mA	Compatible
	Calibration resistor	RV24YN 10kΩ	Compatible

\* When the FR-RC(-H) or MT-RC(-H) converter is used, use the FR-BAL(-H) or MT-BAL(-H).

## 5.2. Replacement of the FR-A7NC

When the FR-A7NC (CC-Link IE Field communication option) is used for the FR-A700-A1 inverters, the FR-A7NC is not compatible with the FR-A800-R2R inverters as the replacement of the FR-A700-A1 inverters. For the CC-Link communication with the FR-A800-R2R inverters, use the FR-A8NC.

### (1) Shape and installation method

The following table shows the differences in the shape and installation method between the FR-A7NC and FR-A8NC.

Item	FR-A7NC	FR-A8NC	Remarks
Shape	Inverter plug-in option, terminal block connection	Inverter plug-in option, terminal block connection	Although the connection method is the same, the circuit board of the option has a different shape.
Terminal block	Dedicated terminal block (M2 small flathead screw)	A6CON-L5P insertion wiring	The shape of the terminal block and wiring method differ. A terminal block is not enclosed.
Installation position	Option connector 3. * After connecting the terminal block, install the front cover of the inverter.	Option connector 1. * After connecting the terminal block, install the front cover of the inverter.	
Terminating resistor selection	Terminating resistor selection switch	Terminating resistor selection switch	
Connection cable	CC-Link dedicated cable	CC-Link dedicated cable	
Communication connector position	Side area on the board	Bottom on the board	The wiring route is different. Check the connection cable length.

### 【Shape of the FR-A7NC】

### LED (operation status indicator)

The operating status is indicated by turning ON/blinking of the LED.

### 【Shape of the FR-A8NC】

Symbol	Name	Description
a	Mounting hole	Fixes the option to the inverter with screws, or installs spacers.
b	CC-Link communication one-touch connector	CC-Link communication can be performed with the CC-Link communication connector.
c	Switch for manufacturer setting	Switch for manufacturer setting. Do not change the initial setting (OFF).
d	Terminating resistor selection switch	Select the resistor value of the terminating resistor.
e	Connector	Connected to the option connector of the inverter.

[Installation procedure of the FR-A8NC]

◆ **Installing the communication option LED display cover**

- (1) Remove the inverter front cover. (Refer to Chapter 2 of the Instruction Manual (Detailed) of the inverter for details on how to remove the front cover.)  
Mount the cover for displaying the operation status indication LED for the communication option on the inverter front cover.
- (2) Cut off hooks on the rear of the inverter front cover with nipper, etc. and open the window for fitting the LED display cover.

- (3) Fit the communication option LED display cover to the front side of the front cover. Push the LED display cover until it is fixed with the hooks.

**NOTE**

\* The protective structure (JEM1030) changes to the open type (IP00).

◆ **Installing the option**

- (1) For the two mounting holes (as shown in the next page) that will not be tightened with mounting screws, insert spacers.
- (2) Fit the connector of the plug-in option to the guide of the connector on the inverter unit side, and insert the plug-in option as far as it goes. (Insert it to the inverter option connector 1.)
- (3) Fit the one location on the left of the earth plate (as shown in the next page) securely to the inverter unit by screwing in the supplied mounting screw. (tightening torque 0.33 N·m to 0.40 N·m)
- (4) Fit the one location on the left of the plug-in option securely to the inverter unit and the right of the plug-in option to the inverter unit together with the earth plate by screwing in the supplied mounting screws. (tightening torque 0.33 N·m to 0.40 N·m) If the screw holes do not line up, the connector may not be inserted deep enough. Check the connector.

Do not insert the plug-in option to the connector 2 or 3.

Insertion positions for screws and spacers

## [Connection cable of the FR-A8NC]

In the CC-Link system, use CC-Link dedicated cables.

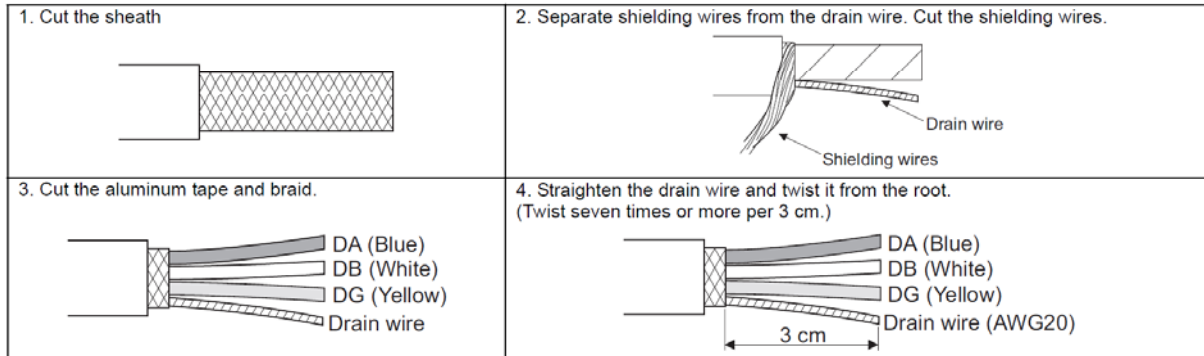

If the cable used is other than the CC-Link dedicated cable, the performance of the CC-Link system is not guaranteed.

For the specifications of the CC-Link dedicated cable, refer to the website of the CC-Link Partner Association.

Website of the CC-Link Partner Association <http://www.cc-link.org/>

### (1) Cable-end treatment

Apply the following treatment at wire end of the CC-Link dedicated cable that is inserted to a CC-Link communication one-touch connector plug (accessory).

### NOTE

- Where possible, round the cable tip that is cut off with a tool such as nippers. If the cable is not rounded, it may get caught in the middle of a plug, without fully entering into the plug.
- If required, apply an insulation treatment to the shielding wire area where it is not covered by the CC-Link communication one-touch connector plug.

### (2) Plug cover check

Check that the plug cover is snapped into the CC-Link communication one-touch connector plug.

### NOTE

- Do not push the plug cover onto the plug before inserting a cable. Once crimped, the plug cover cannot be reused.
- CC-Link communication one-touch connector plug (As of July 2013. The product may be changed without notice.)  
If purchasing a CC-Link communication one-touch connector plug separately, refer to the plugs in the following list.

Model	Manufacturer
A6CON-L5P	Mitsubishi Electric Corporation
35505-6000-B0M GF	3M Japan Limited

(3) Cable insertion

Lift up the tail of the plug cover. Fully insert each signal cable into the CC-Link communication one-touch connector plug as shown in the right figure.

**NOTE**

- Insert the cable fully. Failure to do so may cause a crimping failure.
- A cable sometimes comes out of the head of the cover. In that case, pull the cable a little so that the cable stays under the plug cover.

(4) Crimping the plug cover

Push the plug cover onto the plug with a tool such as pliers. After crimping, check that the plug cover is securely snapped into the plug as shown in the right figure.

**NOTE**

- Misaligned latches between the plug cover and the plug may keep the cover lifted. The plug cover is not sufficiently crimped in this condition. Push the plug cover until it snaps into the plug.

Connect the CC-Link dedicated cable to the CC-Link communication connector.

**NOTE**

- When wiring cables to the inverter's RS-485 terminals while a plug-in option is mounted, take caution not to let the cables touch the circuit board of the option or of the inverter. Otherwise, electromagnetic noises may cause malfunctions.

[Setting of the terminating resistor selection switch of the FR-A8NC]

For the inverter (FR-A8NC) of the end station, configure the terminating resistor selection switch setting in advance.

The following table lists the specifications of the terminating resistor selection switch.

Use the same setting of the terminating resistor selection switch on the FR-A7NC.

Setting	1	2	Description
	OFF	OFF	Without terminating resistor (initial setting)
	ON	OFF	Do not use.
	OFF	ON	130 Ω (resistance value with the CC-Link Ver. 1.00 dedicated high performance cable)
	ON	ON	110 Ω

The parameter numbers are the same between two options. Refer to the following table to set the parameters.

**List of inverter parameters for the FR-A8NC compatible with the inverter parameters for the FR-A7NC**

The following table shows the parameter settings required when replacing the FR-A700-A1 inverter and the FR-A7NC with the FR-A800-1-R2R inverter and the FR-A8NC.

For parameters of the FR-A700-A1 inverters whose setting has been changed from the initial value, set the corresponding parameters of the FR-A800-R2R inverters according to the following table.

For parameters of the FR-A700-A1 inverters whose setting has not been changed from the initial value, it is basically not necessary to change the setting of the corresponding parameters of the FR-A800-R2R inverters.

Setting ◎: Use the same setting of the FR-A700-A1 inverter.

△: Change the setting of the FR-A700-A1 inverter as needed.

×: Adjust and set the FR-A800-R2R parameter independently.

FR-A700-A1 parameter				FR-A800-1-R2R (ND rating) compatible parameter				Description about parameter setting	
Function number	Name	Setting Range	Initial value	Function number	Name	Setting Range	Initial value	Setting	Remarks
