[Title] Corrective actions when the application cannot be started, a new project/workspace cannot be created, or a project/workspace cannot be opened or saved in iQ Works

[Date of Issue] January 2010

[Relevant Models] Mitsubishi Integrated FA Software MELSOFT

iQ Works (MELSOFT Navigator, GX Works2, MT Works2, GT Works3)

Thank you for your continued support of Mitsubishi Integrated FA Software MELSOFT series.

This bulletin explains the corrective actions when the application cannot be started, a new project/workspace cannot be created, or a project/workspace cannot be opened or saved in iQ Works (MELSOFT Navigator, GX Works2, MT Works2, GT Works3).

1. Symptom

When starting the application, creating a new project/workspace, or opening/saving a project/workspace in MELSOFT Navigator, GX Works2, MT Works2, or GT Works3, the following dialog box is displayed and the operation may not be executed even after performing the corrective action as instructed in the dialog box.

(1) Starting the application

1) MELSOFT Navigator

2) GX Works2

(2) Creating a new project or workspace

1) MELSOFT Navigator

2) GX Works2

(3) Opening a project or workspace

1) MELSOFT Navigator

2) GX Works2, MT Works2, GT Works3

iQ Works (MELSOFT Navigator, GX Works2, MT Works2, GT Works3)

(4) Saving a project or workspace

1) MELSOFT Navigator

2) GX Works2, MT Works2, GT Works3

2. Cause

When the operation cannot be executed even after performing the corrective action as instructed in the dialog box, it is possible that your system environment is not fully established to operate iQ works in relation with Windows Update failure or registration/deletion of other companies' software products. The following are the conditions of environment in which the symptoms noted above have been confirmed by Mitsubishi Electric Corporation.

- (1) Microsoft® .NET Framework 2.0 is not operating normally
- (2) MDAC (Microsoft Data Access Components) is not operating normally

iQ Works (MELSOFT Navigator, GX Works2, MT Works2, GT Works3)

(1) Check if MDAC is installed normally

Refer to "MORE INFORMATION" of the following Microsoft Knowledge Base article ID number 307255, and check if MDAC is installed normally using Component Checker.

<http://support.microsoft.com/kb/307255/en-us>

(This information and above URL are provided as of January, 2010)

The following explains the procedure to check if MDAC is installed normally.

1) Access the following website, and download Component Checker (cc_x86.msi).

<http://www.microsoft.com/downloads/details.aspx?FamilyId=8F0A8DF6-4A21-4B43-BF53-14332EF092C9&displaylang=en>

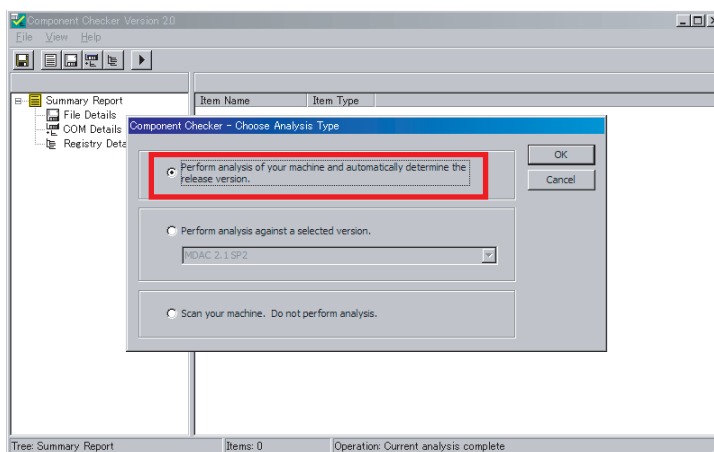

2) Double-click downloaded "cc_x86.msi", and install Component Checker to the folder "C:\CompChecker".

3) Click [Start], and click [Run].

4) Enter "C:\CompChecker\cc.exe" on the displayed [Run] dialog box, and click [OK].

5) Component Checker is started, and the following screen is displayed.

Select [Perform analysis of your machine and automatically determine the release version.], and click [OK].

6) Write down the displayed version information of the currently installed MDAC, and click [YES].

Write down the version information of the currently installed MDAC.

iQ Works (MELSOFT Navigator, GX Works2, MT Works2, GT Works3)

- 7) The following screen is displayed again. Select [Perform analysis against a selected version.], select the MDAC version displayed in the step 6), and click **OK** .

- 8) If MDAC is installed normally, "MATCH" is displayed to all "File Details", "COM Details", and "Registry Details" in "Summary Report".
- 9) If MDAC is not installed normally, "MISMATCH" or "NOTFOUND" is displayed to any of "File Details", "COM Details", or "Registry Details" in "Summary Report".

(2) Repair MDAC installation

Refer to "RESOLUTION" – "Method 2" of the following Microsoft Knowledge Base article ID number 899861, and repair the MDAC installation.

<http://support.microsoft.com/kb/899861/en-us>

(This information and above URL are provided as of January, 2010)

(3) Reinstall .NET Framework 2.0

Reinstall .NET Framework 2.0 after removing it from the PC by following the procedure below.

1) Remove .NET Framework 2.0

1. Click **Start** , and Click [Control Panel].
2. Click [Add or Remove Programs].
3. Click [Microsoft .NET Framework 2.0] in the list, and click **Remove** .

* If higher versions of .NET Framework are installed, .NET Framework 2.0 may not be removed. In this case, remove .NET Framework 2.0 in the order shown below.

Removing order:

1. Microsoft .NET Framework 3.5
2. Microsoft .NET Framework 3.0

The higher versions of .NET Framework removed at this point will be reinstalled in the step 3) following the step 2).

2) Install .NET Framework 2.0

Execute the .NET Framework 2.0 installer on the iQ Works installation CD-ROM.

The following file is the installer to be executed.

D:\SUPPORT\DotNETFx SP1\English\dotnetfx20.exe

("D" indicates the CD-ROM drive. If the used CD-ROM drive is different, replace "D" with the one that corresponds.)

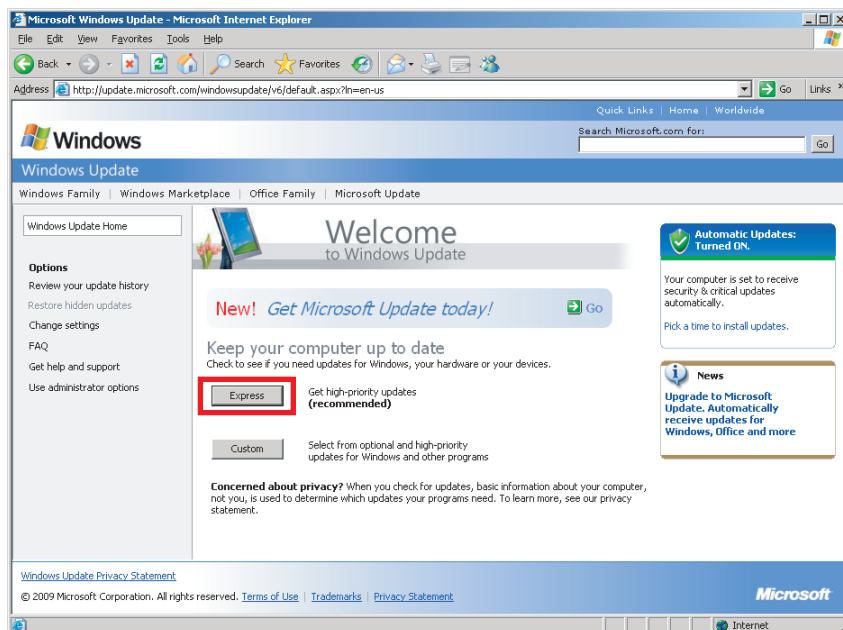

3) Install the most recent Windows update program

Access the Microsoft Update website, and update Windows.

.NET Framework service pack, security update program, or the like are installed.

1. Start Microsoft Internet Explorer, and click [Windows Update] in the [Tools] menu.

2. When the following screen is displayed, Click **Express** .
