

## Sales and Service

### Change in the Indication on Servo System Controller Packaging Labels

Thank you for your continued patronage of the Mitsubishi Electric AC servo system.  
We will change the indication on servo system controller packaging labels from <G> to <H>.

#### 1. Target Model

Servo system controllers

#### 2. Reason for the Change

Four phthalates (DEHP, DBP, BBP, and DIBP) have been added to the restricted substances of the EU RoHS Directive, in addition to the six conventional substances. We will accordingly change the indication on packaging labels from <G> to <H>. This change does not affect the functions and performance of the products.

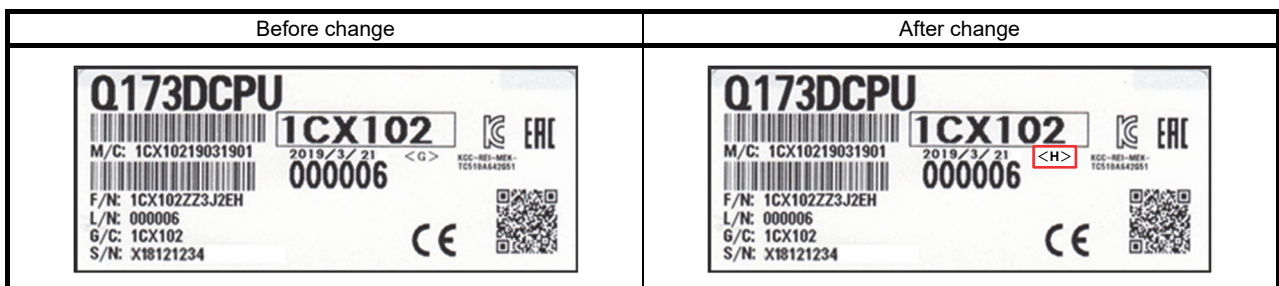

#### 3. Details of the Change

The indication on packaging labels will be changed as follows:

- The indication will be changed from <G> to <H> \*1

We are preparing to make our products comply with the directive as its application due date for industrial monitoring and control equipment (category 9) is July 22, 2021. We will accordingly change the indication on packaging labels of products containing equal to or less than the maximum permitted concentrations of the newly-added restricted substances. The indication will sequentially be changed from <G> to <H> \*1.

\*1. The indication <H> is used individually by Mitsubishi Electric, and it is not the mark of conformity to the EU RoHS Directive.

\* Imprinted indications on some models will also be changed to <H>.

#### 4. Schedule

This change will be made sequentially from the February 2021 production.

Note that, depending on the stock status, the products with both the former and new indications may be distributed in the market around the same time.
