## Information for Replacement of FR-A7ND with FR-A8ND

Precautions concerning replacement and relevant parameters are stated on the following pages.

## Precautions for replacing FR-A7ND with FR-A8ND

## 1. EDS file

The related EDS file can be downloaded via Internet.
The Mitsubishi Electric FA Global Website
http://www.MitsubishiElectric.co.jp/fa/

## 2. Differences between FR-A7ND and FR-A8ND

| Function | FR-A7ND | FR-A8ND | Remarks |
| :---: | :---: | :---: | :---: |
| Product Name of Class 0x01 Instance 1 Attribute 7 | A700/F700/E700 | A800/F800 | Change the configuration of network devices. |
| Product code of Class $0 \times 01$ Instance 1 Attribute 3 | 48/51/49 | 71/73 |  |
| Output/Input Instances of the I/O communication | 20/70, 21/71, 126/176 | $\begin{aligned} & \text { 20/70, 21/71, 126/176, } \\ & 127 / 177 \end{aligned}$ | The common instances are available as they are. |
| Actual-speed area returned value of I/O communication | The speed converted from output frequency ( $1 \mathrm{r} / \mathrm{min}$ increments) is returned. | Running speed monitor is returned. |  |
| Acceleration/deceleration reference of Class $0 \times 2 \mathrm{~A}$ Instance 1 Attribute 18, 19, and 21 | Pr. 1 | Pr. 18 |  |
| Setting range of Class $0 \times 2 \mathrm{~A}$ Instance 1 Attribute 6 (DriveMode) | Fixed to 0 | 1 to 5 |  |
| Returned data of Class 0x2A Instance 1 Attribute 7 (SpeedActual) | The speed converted from output frequency ( $1 \mathrm{r} / \mathrm{min}$ increments) is returned. | Running speed monitor is returned. |  |
| Priority between the node address switch and Pr. 345 (node address) | Pr. 345 setting has a higher priority. <br> (The node address switch setting has a higher priority when Pr. 345 = " 63 ".) | The node address switch setting has a higher priority when any of " 0 to 63 " is set for the switches. <br> (Pr. 345 setting has a higher priority when the node address switch is set to "64" or more value.) |  |
| Writing to Class 0x03 Instance 1 Attribute 1 (MAC ID) | The writing makes the node address switch setting invalid and reflects the setting change to Pr. 345 . | When the node address switch is set to any value from "0 to 63", an error response is returned. | When the node address switch is set to any value from "0 to 63". |
| LED status when network power is OFF after the communication is established | OFF | Red (blinking) |  |
| Operation during I/O communication time-out | E.OP3 error | E.OP1 error occurs when the inverter is running while the operation command source or the speed command source is NET. | When Pr. 502 setting is not changed from the initial setting. |
| Operation during PLC switch OFF | E.OP3 error occurs when the inverter operating in NET mode. | No error occurs when the start signal turns OFF and the speed command source is set to " 0 ". | When Pr. 502 setting is not changed from the initial setting. |
| Communication status at error reset by the Fault Reset bit of the DeviceNet communication or by Class $0 \times 29$ Instance 1 Attribute 12 | Communication stops. | Communication continues. |  |

| Function | FR-A7ND | FR-A8ND | Remarks |
| :--- | :--- | :--- | :--- |
| Writing to Class 0x29 Instance <br> 1 Attribute 5 (NetCtrl) while the <br> inverter is running | Writing is enabled. | Writing is disabled. |  |
| Operation when both STF and <br> STR are simultaneously turned <br> ON through the DeviceNet <br> communication (the forward <br> rotation command and the <br> reverse rotation command of <br> the I/O communication or Run1 <br> and Run2 of Class 0x29) | Inverter stop by <br> simultaneously turning ON <br> the forward and reverse <br> rotation commands. | The previous status of the <br> start signal is held even <br> though the forward and <br> reverse rotation commands <br> are simultaneously turned <br> ON. |  |

## 3. Parameter

The parameter numbers are the same. Refer to the following table to set the parameters.
Setting ©: Set the FR-A7ND parameter as it is.
$\triangle$ : Change the FR-A7ND parameter and set
$\times$ : Adjust or set the FR-A8ND parameters.

| FR-A7ND parameter list |  |  |  | FR-A8ND compatible parameter |  |  |  | Parameter setting |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pr. | Name | Setting range | Initial value | Pr. | Name | Setting range | Initial value | Setting | Remarks |
| 345 | DeviceNet address | 0 to 4095 | 63 | 345 | DeviceNet address | 0 to 4095 | 63 | $\triangle$ | Set "0" to reserve bit 12 to bit 15 . In the FR-A7ND, the Pr. 345 setting has a higher priority. In the FR-A8ND, the node address switch setting has a higher priority when the node address switch is set to any value from " 0 to 63 ". <br> For details, refer to the Instruction Manual. |
| 346 | DeviceNet baudrate | 0 to 4095 | 132 | 346 | DeviceNet baudrate | 0 to 4095 | 132 | $\triangle$ | Set " 0 " to reserve bit 12 to bit 15 . <br> The setting values " 8 and 14 " of Pr. 346 Output/Input Assembly are for manufacturer setting. |
| 349 | Communication reset selection | 0, 1 | 0 | 349 | Communication reset selection | 0, 1 | 0 | © |  |
| 500 | Communication error execution waiting time | 0 to 999.8 s | 0 | 500 | Communication error execution waiting time | 0 to 999.8 s | 0 | © |  |
| 501 | Communication error occurrence count display | 0 | 0 | 501 | Communication error occurrence count display | 0 | 0 | © |  |
| 502 | Stop mode selection at communication error | 0, 1, 2, 3 | 0 | 502 | Stop mode selection at communication error | 0, 1, 2, 3 | 0 | ( |  |
