Change in Appearance of the I/O Signal Connector of the Extension I/O Unit for General-Purpose AC Servo Amplifiers

Thank you for your continued patronage of the Mitsubishi Electric AC servo system. The appearance of the I/O signal connector of the extension I/O unit for servo amplifiers will be changed as follows. This change does not affect the functions and performance of the products.

1. Target Model

MR-D01

2. Reason for the Change

To improve the obtainability of the parts

3. Details of the Change

The I/O signal connector (CN20) will have tapped holes instead of lock nuts. Existing connector sets and cables will fit into the changed connectors properly.

4. Schedule

This change will be made sequentially from the May 2022 production.

Note that, depending on the stock status, the products with both the former and new connectors may be distributed in the market around the same time.
